Dynamic Translations

```
import { loadTranslations } from '@angular/localize';

loadTranslations({
  'flightSearch.title': 'Bonjour!'
});
```

Can be called several times, e. g. in lazy modules

Texts cannot be changed, once they've been used!

I18N and Inputs?

- Pipes are just for outputs
- Use component lib (like Angular Material)
- General concept: `ControlValueAccessor`

Use translations in TypeScript

```
constructor(  
  [...]  
  private translateService: TranslateService  
) {}
```

```
let text =  
this.translateService.instant(this.isAddMode ? 'generic.add' : 'generic.save');
```
